REGENCY CONSERVATORIES

REGENCY CONSERVATORIES

Your Home's Crowning Glory

The Regency range of conservatories offers style as well as substance, and all are designed to provide year-round enjoyment; crafted from high quality materials they provide you with a light, airy summer room and a warm cosy space to comfortably view the winter snows when equipped with optional heating.

We fabricate every window and roof ourselves so we control the quality of the product so that you can be sure that the finished article will look perfect from the cill to the finial. Our use of the unique Synseal conservatory system ensures that every part connects to every other perfectly as all components and profile sections are manufactured by a single supplier to a single, uniform design.

All Regency conservatories come as a complete package as the brickwork, electrics, laminate

flooring **and** vertical blinds are all included in the price.

Then in addition we can even install a high-quality air-conditioning system that can both heat and cool your conservatory as well as purifying and dehumidifying the air so that you're always comfortable inside - whatever the weather outside.

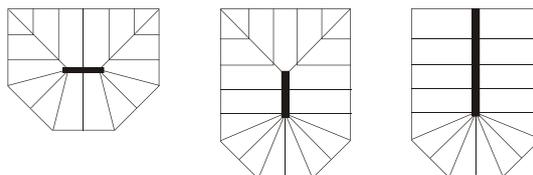

Whatever your tastes Newark Glass can provide you with the perfect conservatory for your lifestyle.

REGENCY CONSERVATORIES SPECIFICATION

DESIGN

Any Regency conservatory can incorporate windows and doors from our Regency window ranges to ensure that you gain the same benefits in your conservatory as you would in any other room of your home. We can offer a wide range of roof styles and either full-height or dwarf wall options.

Our conservatories benefit from our use of an integrated roofing system that ensures that the roof fits the windows perfectly, even matching the colours and shapes of the separate profiles..

GLAZING

The windows are fitted as standard with 28mm square-edged sealed glazing units - as determined by the type of window chosen.

The roof can be glazed using either high-quality polycarbonate which helps to reduce glare in bright sunlight, or toughened glass sealed units which conserve heat during the winter.

REINFORCEMENT

The intrinsic strength of the profile is supplemented where necessary by the inclusion of Steel and Aluminium reinforcing in transoms, mullions, opening vents and the outer frame where extra support is desirable.

WEATHERSEALS

Dual weatherseals fitted to all opening vents have excellent weathering characteristics to ensure long-term reliability and consistent performance.

HARDWARE

The hinges, locks and handles used on the Regency range have been chosen to provide the combined benefits of reliable operation, ease of opening, high security when closed and colours to match the window.

QUALITY ASSURANCE

Newark Glass is registered to ISO9001:2000 for the manufacture of windows, doors, sealed units and conservatories and employs full-time QA staff including Inspectors and Testers.
